

Equilibrium predictions of the two-stage model ($p^*_{DA} = \text{€}163/\text{MWh}$, Cournot Lerner = 13.6%, regime-invariant)

P1 — Settlement transfer $T(K, \alpha)$ endogenous via BRP optimisation

P4 — Renewable burden invariance (uniform-allocation rule)

P5 — Pigouvian rule redistributes burden ($\beta_R=8, \beta_C=220 \text{ €/MWh}$)
